

Screenshots

```
MMO $ ./lbstats.py -h
usage: lbstats.py [options]"
Examples:
    lbstats.py -p JoePilot -s 3
    lbstats.py -p "Joe Pilot" -w a
    lbstats.py -p list -s 2 -f stats.csv

A simple MMO stats scraper that dumps a specified users leaderboard stats to
stdout and optionally a csv file.

optional arguments:
  -h, --help            show this help message and exit
  -p <PilotName>        Required: Can be an individual pilot name or the list of
                        pilots defined at the top of the script. The list is
                        useful to track the same list of pilots, like all the
                        pilots of a given unit. Use quotes for spaces and
                        capitalization counts
  -w <all|l|m|h|a>      Optional: The Mech weight class, where g=global, l=light,
                        m=medium, h=heavy, a=assault. Default is to get all
  -f <FileName>         Optional: The name of the csv file to dump the stats to.
                        Default is to print to standard out only.
  -s <Season>           Optional: The leaderboard season. Default is 3
  -v, --version          show program's version number and exit
```
